MAP SHOWING LOCATION OF NURSERY.

APR 27 1917

PRODUCTS OF ONE OF MY PURE-BRED PLANTS.

To the Grower.

THESE FACTS WILL INTEREST YOU.

It is to my interest as a producer of nursery stock that your success as a grower of plants purchased from me be assured. Hence my aim is always to deliver fresh, well packed nursery stock of high grade to my customers.

Every variety offered has proven, through testing, its adaptability to Northwestern soils and climate and has been approved by leading horticulturists.

While I try out and investigate many new varieties, I do not do so at the expense of my customers, but give them the benefit of my experience.

By propagating and selling direct to you we eliminate nursery agents commissions, probable misrepresentations, too frequent handling of stock and damaging delays in delivery. The profits are shared with you.

Former experience and favorable climatic conditions have aided me in producing superior stock and I am better prepared than ever to render satisfactory service.

The filling of every order is given individual attention in my packing cellars under my personal supervision. Deliveries are made to the nearest express office by automobile, insuring the quickest transportation from nursery to buyer.

By this method I can reach in twenty minutes the offices of any express company in the Northwest, insuring speedy delivery and eliminating the necessity for changing lines en route. The central location of my nursery is of greatest value to my patrons as it tends to expedite delivery and guard against delays that are apt to rob plants of their vitality.

The prices following are as reasonable as is consistent with the careful and scientific growing of hardy nursery stock. No discounts allowed on quoted prices.

Home-grown Strawberries.

Freshly packed, home-grown berries are so superior to those obtained from other sources that lovers of this delicious fruit cannot well afford to be without their private patch, the culture of which makes a pleasurable and profitable pastime.

The growing of strawberries for profit is now recognized as an important branch of Northwestern horticulture.

With good plants to start with and the right kind of care, strawberry culture is an exceedingly profitable business.

Home-grown berries are always in demand and command the highest prices.

Pure-bred Strawberry Plants.

My plants are sturdy, well rooted, pure bred, year-old plants. They have been mulched all winter to insure abundant vitality to withstand transplanting. I use commercial fertilizer at considerable expense to produce plants of the very best quality. My twenty-five years' experience as a berry grower has convinced me that plants propagated for transplanting should excel in root vitality.

Barnyard manure, while producing luxuriant tops, does not develop root strength in the young plant equal to that produced by the especially prepared fertilizers.

Each order is dug and packed separately and shipped the same day. I do not dig large quantities of plants and then fill orders from a stock room.

Plants are tied twenty-five in a bundle.

While I have a large stock of every variety listed, it is to your advantage to order early as certain varieties always sell far in excess of others. Orders will be filled in the order received. In case a variety should be exhausted I will substitute another of equal merit and similar character unless you stipulate otherwise.

Staminate varieties will produce berries as well alone as with other varieties, but pistillate kinds must be set in alternate rows with staminate varieties that blossom about the same time. Varieties are listed in order as to their time of fruiting.

EVERBEARING STRAWBERRIES.

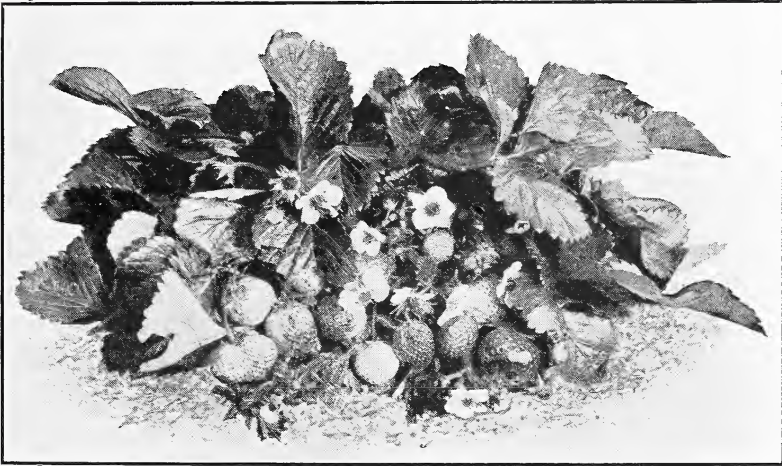

This is the third year that I have offered for sale these wonderful new varieties of strawberries. It is my custom to try out new varieties before offering them for sale and if they do not prove satisfactory I discard them, for I do not believe in imposing novelties and untried varieties at high prices on my customers.

I am so well pleased with the four varieties which I quote below that I recommend them to you, believing that you will be well pleased.

This variety of strawberry does not wait until the year after planting to produce a crop of fruit, but starts right in to bearing about the first of August of the year you plant them and bears abundantly until they freeze in the fall.

As fast as the new plants set their roots they begin to bear fruit, thus the crop is heavier in late fall than earlier in the season.

The next spring there will be a fine crop of fruit in June. If the late spring frosts destroy one set of blossoms there is another set ready to take their place which is not the case with the ordinary June bearing strawberry. The June crop is assured in this way and is much heavier than can be produced on the ordinary June varieties. One must remember that the everbearing strawberry raises its fall crop the same year that they are set and a crop the next spring which has the advantage of keeping the ground busy and not losing one season as is necessary with the June bearing varieties.

Photograph of superb plant taken October 30.
This plant was set May 1, and bore over two quarts of ripe fruit
which sold for 30 cents per quart.

I had no difficulty in disposing of all of my crop the past season for 30 cents per quart and as they produced a heavy crop for three months, the proceeds were very satisfactory.

Plants are very hardy.

NO. 1017. Staminate. This variety was originated at the Minnesota State Fruit Breeding Farm a short time ago and has shown an improvement over the older varieties of everbearing strawberries. It is equal to the Superb in size and yields as good or better than Progressive. The foliage is vigorous and healthy. This is the best plant maker I have ever seen among the Everbearing class.

Price: 75c for 12 plants; \$4.00 per 100; \$25.00 per 1,000.

PROGRESSIVE. Staminate. After my third season I have come to the conclusion that this variety is the most profitable to raise. Fruit is medium to large and is a wonderful yielder, produces an abundance of fruit for over three months, when freezing weather kills the blossoms. Price: \$2.00 per 100; \$10.00 per 1,000.

SUPERB. Staminate. This variety, probably, produces the largest in the ever-bearing class. The berries often growing to the size of a hen's egg, but the yield is not so great as the Progressive or Americus. Price: \$2.00 per 100; \$10.00 per 1,000.

AMERICUS. Staminate. This is a very productive variety. Fruit of medium size and of excellent quality. Price: \$2.00 per 100; \$10.00 per 1,000.

Photograph of a portion of my ever-bearing strawberry patch. This picture was taken October 15, while picking the ripe fruit. (Note the ripe field of corn in the background.)

JUNE BEARING VARIETIES.

MINNESOTA NO. 3. Staminate. While this is a new variety of strawberry it has been tried out by the leading growers of this state and all are unanimous in pronouncing it the coming June bearing strawberry. No. 3 was originated a few years ago at the Minnesota Fruit Breeding Farm and the plants sent out in small numbers for trial. The result was that the growers who tried them were so pleased that we think we have a berry now that is better than any of the standard varieties.

No. 3 is the result of a cross between Senator Dunlap and Pocomoke and in some ways resembles the Dunlap but is far superior as it produces a larger fruit and is a much heavier yielder. The fruit has that attractive, glossy appearance which is one of the Dunlap's features. The plants are larger and the roots longer than the Dunlap which accounts for its better drought-resisting qualities and the long season of fruiting. Try No. 3 and you will be well pleased. Price: \$2.00 per 100; \$10.00 per 1,000.

MINNESOTA NO. 3 STRAWBERRY PLANTS IN FULL BLOOM.
(Note prolific growth of plants and blossoms.)

GIBSON. Staminate. Early to late. This wonderful new strawberry stands at the head of the extra large kinds. The Gibson commences to bear with the Senator Dunlap, but owing to its wonderful productiveness, it continues until quite late. It is a very strong grower, with long roots that withstand the dry weather, and has plenty of dark green foliage to protect its enormous crop of fruit from the direct rays of the sun. The fruit is a beautiful dark, glossy red. The flesh is red clear through. The berry is extra large and the flavor cannot be surpassed. I am slow to recommend new varieties but I can recommend Gibson without fear of criticism. Price: \$6.00 per 1,000; \$1.00 per 100.

WARFIELD. Pistillate, early. This is one of the old varieties that is still very popular. The fruit is a glossy red in color and is of the same deep red to the center which makes it an attractive seller. It cannot be surpassed as a canning berry. The size of the fruit is large and it is a heavy yielder. \$4.00 per 1,000; 80c per 100.

BEDERWOOD. Staminate, early. This is one of the best pollenizing varieties as it blossoms for a long time and produces a large amount of pollen. It is fairly productive. The fruit is crimson in

color with a glossy surface and deeply imbedded yellow seeds. The fruit is medium in size. Bederwood makes a good pollenizer for Warfield. \$4.00 per 1,000; 80c per 100.

CRESCENT. Pistillate, early. A well known variety. Although grown for many years, is still a money-maker. The fruit is very attractive and medium in size, while the yield is enormous. The fruit is crimson in color and a good shipper. \$4.00 per 1,000; 80c per 100.

HELEN DAVIS. Early to late, staminate. Without a doubt Helen Davis is the best new variety. The immense fruit is a beautiful crimson with a very smooth surface. The seeds are so deeply imbedded in the flesh that they are almost invisible. The flavor is excellent, almost equal to that of the Brandywine. It is a strong pollenizer. Do not fail to give this berry a trial. \$5.50 per 1,000; \$1.00 per 100.

CYLDE. Medium early, staminate. Popular on account of its large size and productiveness. A very handsome berry and profitable to the grower. \$5.00 per 1,000; \$1.00 per 100.

FENDALL. Early to late, pistillate. This is a variety which I have fruited several seasons. I am so well pleased with it that I can recommend it to you as one of the coming varieties. The fruit is very large and of exceedingly good quality. A vigorous grower and a heavy cropper. \$5.50 per 1,000; \$1.00 per 100.

LONGFELLOW. Staminate, medium. This is one of the most promising of the new varieties as it seems to possess nearly all of the good qualities. It is like the Fendall in that it produces from early to late and that the berries are large and of excellent flavor. Longfellow makes a good mate for Fendall. \$5.50 per 1,000; \$1.00 per 100.

SENATOR DUNLAP Staminate, medium. This variety has become so popular that no description is necessary, but with the exception of No. 3 I can recommend it as the best all-around berry, for it seems to possess all the good qualities necessary to make it a success with only ordinary care. My price is very low. \$4.50 per 1,000; 85c per 100.

HAVERLAND. Pistillate, medium. A handsome berry of splendid quality. Fruit tapering and long. I have raised Haverlands for many years and have always found them prolific and attractive sellers. \$4.50 per 1,000; 85c per 100.

BRANDYWINE. Staminate, late. This is my favorite for a profitable late berry. Productive, large and demands the best prices. I have often sold the Brandywine for \$4.00 per case, when ordinary berries were selling for \$2.25. \$5.50 per 1,000; \$1.00 per 100.

DORNAN. Staminate, late. Produces an immense quantity of extra large berries of an attractive red. Foliage large and luxuriant and serving to protect the berries. \$5.50 per 1,000; \$1.00 per 100.

AROMA. Staminate, late. The fruit of this variety is large and a beautiful bright red in color. The flavor is deliciously aromatic and very rich. The flesh is smooth and solid. This is a very attractive berry when in the box for sale. A strong pollenizer. \$4.50 per 1,000; 85c per 100.

SAMPLE. Pistillate, late. One of the heaviest yielders known. The size of the fruit is large and the flavor excellent. This

berry is one of the best for commercial planting as it ships well and has many other good qualities. \$4.50 per 1,000; 85c per 100.

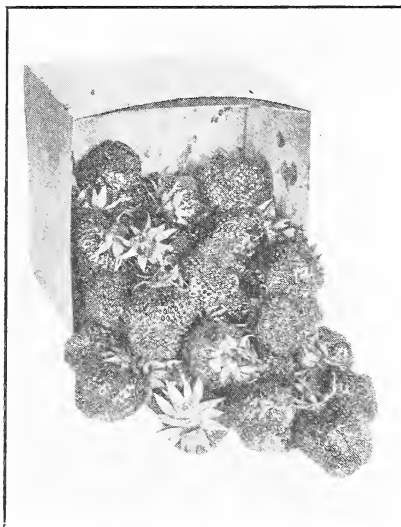

STEVENS' LATE CHAMPION.

Staminate, late. This berry is a favorite with many on account of its extreme lateness and because the fruit is of a large size and has good shipping qualities. One of the hardy kinds. \$5.50 per 1,000; \$1.00 per 100.

PRIDE OF MICHIGAN.

Staminate, late. This is a market-topping berry, and although the price is high the grower will find it a profitable berry to grow. \$5.50 per 1,000; \$1.00 per 100.

A quart of
Haverlands
from my
pure-bred
plants.

ASPARAGUS.

My asparagus plants are one year old which are not so large as the two-year old roots but are better for transplanting as the older plants are woody and apt to be stunted.

PALMETTO. A well-known variety that is said to be disease resisting, but I have found it about as susceptible to disease as any other variety.

CONOVER'S COLLOSSAL. A standard variety. I grow this almost exclusively for market.

COLUMBIAN MAMMOTH WHITE. A light colored sort of excellent quality.

BONVALLET'S GIANT. A new variety with exceptionally good qualities.

Any of the above four varieties, one-year roots, 50c per 100; \$3.00 per 1,000.

Rhubarb or Pie Plant.

MAMMOTH VICTORIA. This new variety is all that is claimed of it. It is much larger and better in every way than the old varieties. A great many rhubarb plants are being offered for Mammoth Victoria which are only seedlings of this variety. Rhubarb does not come true to name from seed. I obtained my stock of plants from a reliable source and they are the genuine Mammoth Victoria and not seedlings of this variety.

Divided roots, 20c each; \$1.00 per 10. For larger quantities I will quote prices on application.

Photograph illustrating size of my
Mammoth Victoria Rhubarb.

CURRENTS.

The growing of currants is pleasant, clean and very profitable. I have several acres of this fruit in bearing and am fruiting twenty varieties. I offer for sale strong, well rooted two-year plants of my best varieties as follows:

LONG BUNCH HOLLAND. A currant that has given the best of satisfaction wherever grown. The plant is an upright grower and the foliage is very heavy, which insures the crop against sunscald. The yield is heavy and the season late, which I consider an advantage.

Prices: No. 1 two-year old plants, 10 plants, \$1.00; 25 plants, \$2.00; 100 plants, \$6.00.

POMONA CURRANT. The fruit of this currant is a clear bright red and of fine quality. An extremely heavy bearer and one of the most profitable.

Price: No. 1 two-year old plants, 10 plants, \$1.00; 25 plants, \$2.00; 100 plants, \$6.00.

WILDER. An upright, vigorous, early variety. Fruit very large and of a bright red color. A very choice sort for all purposes.

Price: No. 1 two-year old plants, 10 plants, \$1.00; 25 plants, \$2.00; 100 plants, \$6.00.

RED CROSS. A vigorous, productive variety with long clusters of bright red berries of best quality.

Price: No. 1 two-year old plants, 10 plants, \$1.00; 25 plants, \$2.00; 100 plants, \$6.00.

DIPLOMA. A new variety the fruit of which is the largest I have ever seen. This currant fruits abundantly and the clusters are very large. I have fruited this currant two seasons and am more than pleased with it. I have only a limited number of plants which I offer at 10 plants for \$1.50; 100 plants for \$10.00.

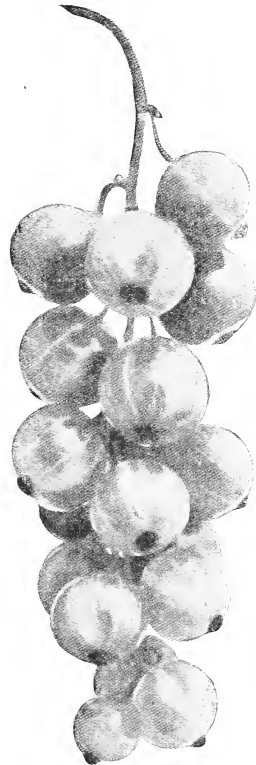

LONDON MARKET. I can recommend this as one of the best for both home use and market, as the fruit is large and the plant is very productive and comes into bearing at least one year earlier than any other variety that I have grown.

I offer extra large, well rooted two-year-old plants at the following prices: 10 plants, \$1.00; 25 plants, \$2.00; 100 plants, \$6.00.

CHERRY CURRANT. This currant is well named as the fruit is extremely large and hangs in large clusters, making it one of the most desirable varieties to grow.

Price: No. 1 two-year old plants, 10 plants, \$1.00; 25 plants, \$2.00; 100 plants, \$6.00.

CHAMPION. This is the most productive of all black currants. Price: No. 1, large, well rooted plants, 10 plants, \$1.00; 25 plants, \$2.00; 100 plants, \$7.00.

RED RASPBERRIES.

KING. I am safe in recommending this as a raspberry for everyone as I think there is no red raspberry that has as many good qualities as the King. The fruit ripens early and stands shipping well and the over-ripe berries fall off, which is a great advantage over most of the other varieties, for then they are out of the way and the pickers do not get them in the boxes to spoil the good fruit. The plants are very hardy and do not blight easily. Price: \$1.00 per 100; \$8.00 per 1,000.

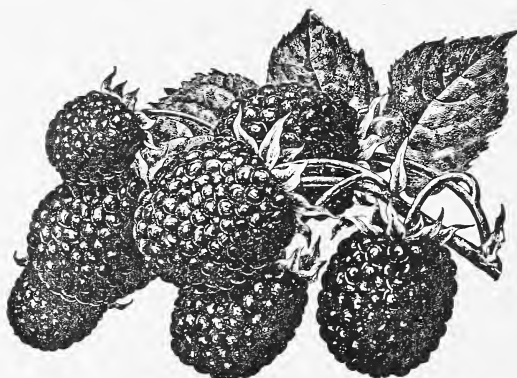

KING.

MINNETONKA IRON CLAD.

A very hardy late variety of red raspberry. Berries are large, firm, bright red and of good quality, very productive and thrifty. Price: \$1.00 per 100; \$8.00 per 1,000.

Snyder Blackberry.

This popular, hardy and profitable blackberry is well known and planted extensively. Where other varieties have entirely failed it proves itself hardy. Productiveness is one of its many good qualities. Price: \$1.00 per 100; \$8.00 per 1,000.

Gooseberries.

A branch 15 inches long of Carrie Gooseberry.
When cut from the bush it had
over 2000 berries.

THE CARRIE. This variety has become so well known that I do not need to mention its many good qualities but I will say that it is nearly thornless and is practically disease resisting. 10 plant, \$1.00; 100 plants, \$8.00

CHARLES DOWNING. This variety is a strong, vigorous grower and produces immense quantities of large fruit which holds a green color until quite ripe. This is the hardiest of the large fruiting kinds. 10 plants, \$1.00; 100 plants, \$8.00.

GRAPES.

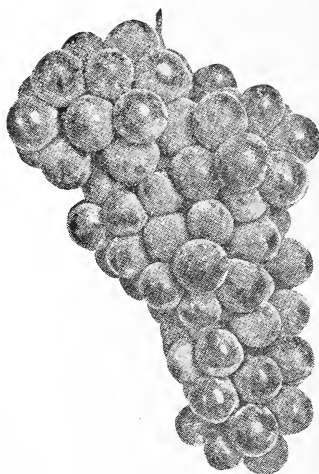

BETA GRAPE. This variety is perfectly hardy and very early, and when cut back produces large clusters of medium sized fruit of good quality. This is a good arbor grape and produces quantities of fruit when grown in this way. I recommend it on account of its hardiness and productiveness. Price: 30c each; \$2.50 per 10; \$20.00 per 100.

CONCORD. Black. The most popular and common American grape. Price: 30c each; \$2.50 per 10; \$20.00 per 100.

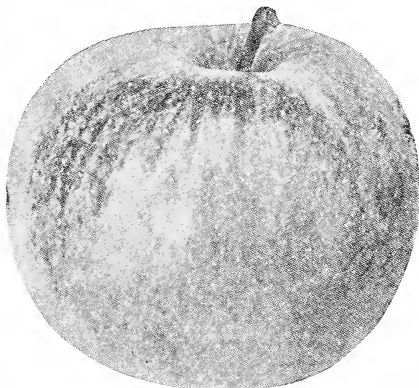

WORDEN. Similar to Concord. Larger and better berry. Ripens several days earlier, very hardy, vigorous, productive. Price: 30c each; \$2.50 per 10; \$20.00 per 100.

NIAGARA. A vigorous and very productive white variety.

Bunches very large and compact and of fine quality, ripens few days before Concord. Price: 30c each; \$2.50 per 10; \$20.00 per 100.

Apple Trees.

My apple trees are three years old and 5 to 7 feet tall which is the best size to set.

WEALTHY This late fall apple is without a doubt the most popular apple in its class. It is an upright grower, producing large red fruit which ripens late in the fall and keeps well in any ordinary cellar until January.

DUCHESS. This is the standard early commercial sort. A very hardy and prolific tree which bears large fruit striped with crimson.

OKABENA. This apple ripens after the Duchess and is one of the best money makers as the season is just right to demand the highest prices as there are few shipped in apples at that time.

PATTEN'S GREENING. Very hardy and free from blight. An abundant bearer. Fruit large. One of the best all-around varieties.

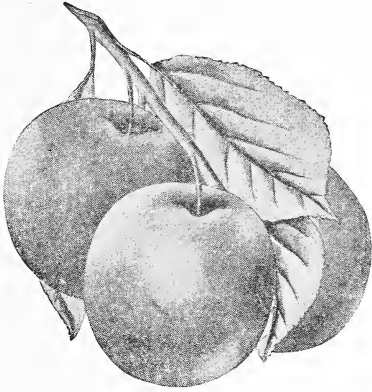

WOLF RIVER. A strong and vigorous grower producing fruit of the largest size which is very highly colored.

CRABS.

VIRGINIA. A hardy, strong growing crab. Fruit large and acid. This is a good substitute for the Transcendant where that variety blights. I do not grow the Transcendant on account of its tendency to blight.

Any of the above apple trees or crabs, 15c each; \$12.00 per 100.

Plums.

DE SOTO. A standard plum which is a heavy yielder. The fruit, which is large, is yellow, turning red at maturity. I find De Soto the most profitable of the ten varieties grown in my orchard.

Three-year old trees, four to five feet, 35 cents each; \$3.00 for ten.

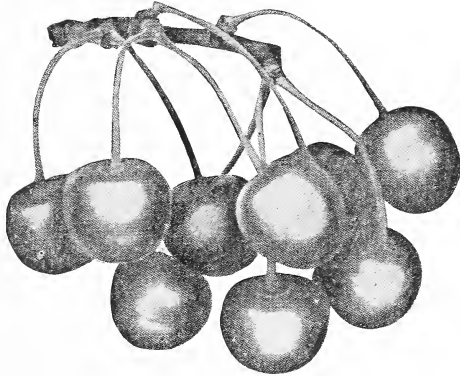

FOREST GARDEN. Very vigorous grower and profuse bearer of good sized reddish-yellow fruit of good quality. Price: 35c each; \$3.00 for ten.

Cherries.

EARLY RICHMOND.

This is a cherry that is adapted to our Minnesota climate and where all other cherries have failed the Richmond grows and bears abundantly. Fruit, dark red and of good size.

Price: 35c each; \$3.00 for 10.

Flowering Shrubs and Plants.

The flowering shrubs I am offering are the most popular of all flowering shrubs. They are very hardy and easily cared for. No garden should be without the richly blooming hydrangea, the graceful spirea or

the ever beautiful snowball. A few of each should appear conspicuously about the lawn or yard.

Mine are large, strong, two-year-old plants. They were transplanted a year ago and thereby gained a heavy root growth and well developed top.

SPIREA VAN HOUTI. This graceful shrub is beautiful all summer as the foliage is dense and of a drooping nature. The leaves turn a beautiful dark red early in the fall. Early in June the whole shrub is a mass of drooping sprays of white blossoms. Plants, 35 cents each; \$1.00 for three.

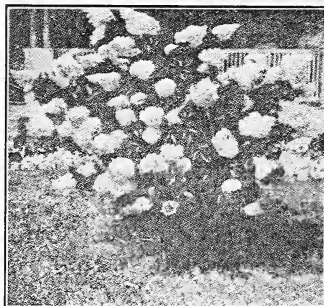

Spirea Van Houti in bloom at my nursery.

SYRINGA. (Alba Grandiflora)—A large vigorous, upright growing shrub. Flowers white, blooms very freely in June. Plants, 35c each; \$1.00 for three.

SNOWBALL. This well known shrub or tree blossoms early in summer. The whole tree is covered with lavish white bloom on Decoration Day, when its flowers are always used conspicuously in the ceremonies incident to the day. 35 cents each; \$1.00 for three.

HYDRANGEA (PANICULATA). This is a well-known flowering shrub which blossoms early in the fall and the flowers of which are large and almost white at first, change to a purple later and do not fade until they are frozen. When blossoms are cut off before frosted, and dried, they retain their beauty for many weeks and make a nice floral ornament for the winter. They blossom the same year that they are set out.

Large three-year old plants, 35c each; \$1.00 for three. Two-year old plants, 25 cents each; \$1.00 for five plants.

HONEYSUCKLE (TARTARIAN). Very hardy, strong growing and attractive, growing to a size of about six feet. It flowers in early spring and later produces bright red berries. A good hedge plant or a good shrub for the lawn.

Price for either pink or white two-year plants, 35 cents each.

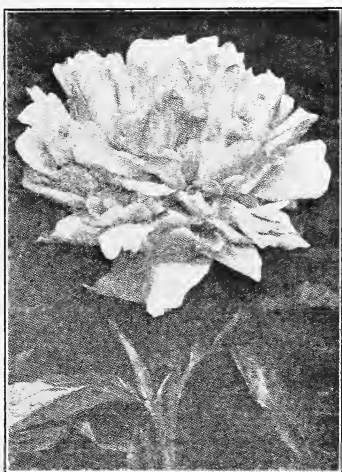

BUCKTHORN. A very hardy and desirable hedge plant or may be grown in the lawn. It stands shearing exceedingly well. Two-year old plants, 15 cents each; \$1.25 for ten; \$8.00 for 100.

BARBERRY (Thunbergii.) Dwarf in growth with graceful drooping branches. Yellow bloom, scarlet fruit, foliage green, changing to scarlet and gold in the fall.

This plant makes a good hedge plant, or for individual specimens in the lawn.

Price: Large three-year old plants, 25c each; \$2.00 for 10 plants; \$15.00 per 100.

BARBERRY (Purpuria) or Purple Barberry. Foliage a beautiful deep purple all the year; a splendid specimen shrub and almost indispensable in contrastive groups. Price, two-year old plants, 25c each; \$2.00 for 10 plants.

Peonies.

I have the white, pink, red or mixed at 20 cents each; \$1.50 for ten divided roots.

German Iries.

Blue, 20 cents each; \$1.25 for ten.

Bleeding Heart.

Popular, hardy, ornamental, fine foliage, and drooping racemes of heart-shaped flowers, blooms in May and June. 25c each; \$2.00 for ten.

BLEEDING HEART (Single)

25c each; \$2.00 for ten.

ENGLISH IVY. One of the very good climbing plants for the house. This is a very attractive vine. Price: 25 cents each; \$2.00 for 10.

ROSES.

My roses are field grown and are two-year old plants which are sturdy and well rooted.

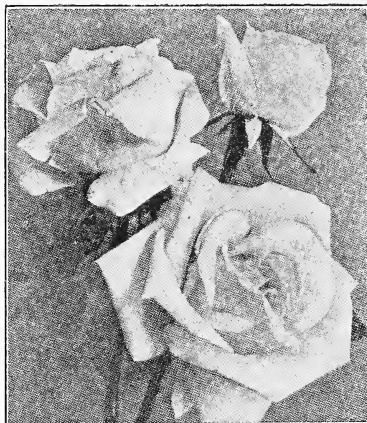

Hybrid Perpetual Varieties.

GENERAL JACQUEMINOT. Dark crimson double, large and very popular.

BLACK PRINCE. Intensely dark crimson, large and full. One of the finest of its class.

MAMAN COCHET. This tea rose is valuable on account of its rich rosy pink color with silvery outer petals. Roses are produced on long stems which make it desirable for cutting.

PRINCESS ADELAIDE. Right rosy pink, large, double and fragrant. Buds beautifully mossy.

Ramblers and Climbers.

EVERBLOOMING CRIMSON RAMBLER. Brilliant crimson, base of petals, white. Blooms profusely in brilliant clusters from early summer until frost.

BLUE RAMBLER. This is the nearest approach to a blue rose, otherwise resembles the Crimson Rambler.

CRIMSON BABY RAMBLER. This dwarf Rambler is very popular as it produces abundance of flowers until frost and all winter, if taken indoors. Very hardy.

WHITE BABY RAMBLER. Snow white, double, blooms in profuse clusters, making a striking and beautiful appearance. Everblooming and hardy.

YELLOW RAMBLER. Much like the other Ramblers but of a golden yellow color.

PRAIRIE QUEEN. Bright rosy red. Large compact flowers in clusters. A standard variety.

SEVEN SISTERS. Flowers in large clusters varying from rosy red to white blush, several shades frequently found in the same cluster.

DOROTHY PERKINS. Beautiful shell pink in color which holds for a long time. It is equal to Crimson Rambler in foliage, hardiness, habit of growth and blooming qualities.

MARY WASHINGTON. Pure white flowers of medium size, blooming profusely in large clusters throughout the summer.

BRIDE'S MAID. Clear, shining pink; buds of exquisite shape; stems very long.

Price of any of the above roses, 30 cents each; four for \$1.00.

EVERGREENS.

I have a stock of White Pine, Norway Spruce, Norway Pine, Scotch Pine and Colorado Blue Spruce of different sizes. While evergreens are hardy and a very desirable tree to plant, many do not have success in making them grow. The reason for this is often because the roots are injured when they are shipped from the nursery to the planter.

My evergreens have all been transplanted two or three times, have an excellent root growth and are well developed with a compact, symmetrical top. I take great pains in digging and packing. With the care which I take in digging and good care in transplanting, I am sure you will succeed.

WHITE PINE. A beautiful tree for country lawns. Three to five feet, three times transplanted, 75 cents each; \$6.00 for ten.

NORWAY PINE. Also a good tree for country lawns, grows faster than the White Pine, but is a little coarser and not quite so attractive. Three to five feet, three times transplanted, 75 cents each; \$6.00 per ten.

COLORADO BLUE SPRUCE. This is a very beautiful spruce which does well in this locality. Form is very symmetrical and the foliage varies in color from a green to a deep blue.

Price for trees transplanted three times and very select specimens, 18 to 24 inches high, 40c to \$1.50 each, according to color of foliage of individual specimens.

NORWAY SPRUCE. A compact growing tree which is popular for city lawns and parks.

My spruce has been given lots of room and has been transplanted from 3 to 4 times. Do not confuse these trees with trees that have been set close in the nursery row and have not had a chance to develop prop-

erly. 18 to 24 inches, 40c each; \$3.50 for 10; larger specimens in proportion.

This is the hardiest of all evergreens, which makes **RED CEDAR.** a handsome individual tree, or may be planted as a hedge, as it stands shearing.

Price of trees about 24 inches high and bushy, which have been transplanted three times, 75c each; \$6.50 for 10.

White Elm.

One of the best and most popular trees for any purpose. A very desirable shade tree. Prices quoted on application.

Linden or Basswood.

A beautiful tree that should be more widely planted. Prices quoted on application.

Hardy Catalpa.

A rapid growing tree of tropical nature, and desirable as an ornament. Leaves heart-shaped and very large. Flowers in large clusters, sweet-scented, ripening into long, bean-like pods. Price: Eight to ten feet high, \$1.00 each.

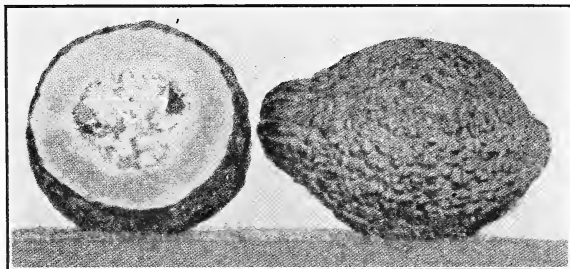

MOUNTAIN ASH. A handsome lawn tree. The large clusters of red berries adding to its general beauty.
Price: 4 to 5 feet high, 60 cents each; \$5.00 for ten.

This is one of the handsomest and
CUT-LEAF WEeping BIRCH. most popular of all ornamental trees.
The bark is silvery white and the
finely cut foliage droop making a very attractive appearance.
Price: 4 to 6 feet, 60 cents each; \$5.00 for 10.

Ginseng.

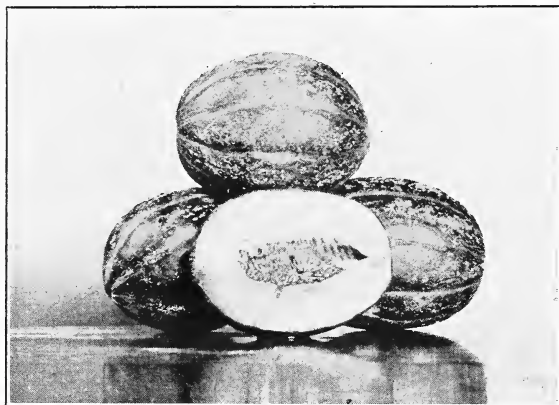

The growing of ginseng is very profitable as the roots sell for high prices when about six years old. Ginseng thrives in shady places. I have a fine lot of year old roots at \$10.00 per 1,000.

Hubbard Squash Seeds.

My Hubbard Squash for years has been selected for size, uniformity and thickness of meat. They were grown at a distance from any other vine crop to prevent mixing. The above illustration was taken from a photograph of fair samples of the crop of squash from which my seeds were taken. Ounce, 15 cents; $\frac{1}{4}$ pound, 25c; 1 pound, 75 cents. If ordered sent by mail, add 8 cents per pound for postage.

Miller's Cream Musk Melon.

Samples of Melon from which I take my seeds.

This salmon-fleshed melon is too well known to require a description here. I have grown it in large quantities for the market and have found it the best seller of any variety which I have grown. My seed is from stock selected with a view to size, type, thickness of meat and uniformity, discarding all "slickers" when saving seed.

I do not raise or sell any other kind of melon seed, but put all my energy into the highest development of this type of hybrid, which has been proven by the uniform heavy meated melons raised by my customers in the vicinity of St. Paul. Know what you are getting in melon seed. My stock of seed was grown in 1914.

Price: Oz., 25c; $\frac{1}{4}$ pound, 75c; 1 pound, \$1.50.

If ordered sent by mail, add 8 cents per pound for postage.

Prices quoted in this price-list are f. o. b. St. Paul.

Deliveries will be made daily to the different express offices in St. Paul and to the St. Paul post office.

TERMS.

Cash with order when stock is to be shipped, or will accept one-fourth of purchase price in advance and ship goods C. O. D. for balance if preferable.

MY GUARANTEE.

That all nursery stock, herein quoted, is grown under modern scientific methods.

That plants are securely and freshly put up in damp packing material.

That all nursery stock is true to name and correctly labeled.

That certificate of inspection accompanies each shipment of nursery stock.

In no case will I be liable for more than the original purchase price.

Inspection completed September 21, 1916.

MINNESOTA AGRICULTURAL EXPERIMENT STATION.

Office of State Entomologist.

No. 921.

St. Anthony Park, December 9, 1916.

CERTIFICATE OF NURSERY INSPECTION.

This is to certify that in accordance with Sec. 1, Chapter 206, Session Laws of 1913, the nursery stock and premises of J. V. BAILEY, OF NEWPORT, MINN., J. V. Bailey, Proprietor, have been carefully examined by a duly authorized inspector and found apparently free from dangerously injurious insects and contagious plant diseases.

This certificate is good until Nov. 1, 1917, unless revoked, and covers only stock actually on the premises when examined.

G. W. PEAKE,

F. L. WASHBURN,

Chief Deputy. State Entomologist & Nursery Inspector.
